(75) Inventors/Applicants (for US only): MATSUSHIMA,

(54) Title: A CONTENT DISTRIBUTION SYSTEM AND A REFERENCE SERVER

WO 01/41023 A1

(57) Abstract: A content distribution system includes a plurality of distribution servers (101-108), and a reference server (112). The reference server (112) holds URLs showing network locations of the plurality of distribution servers (101-108), and transmits a URL for a distribution server to user terminal (109) in response to a user's request. When one of the distribution servers (101-108) is accessed by a user terminal (109), the distribution server determines whether access has been performed as a result of receiving location information from the reference server (112). If this is the case, the distribution server generates payment information commanding the user terminal to pay the distribution server and the reference server, and transmits a distribution package including the payment information and a digital content to the user terminal.
